PROFESSIONAL SUMMARY

AI and Software Engineer with over 4+ years of experience in developing AI-powered applications, backend services, RESTful APIs, and enterprise systems. Specialized in **Python**, with strong experience in FastAPI, Flask, AI/ML, RAG, LLM/VLM, and backend system development. Strong understanding of software architecture, databases, Microservices, MVC, cloud platforms, DevOps, and production-oriented system development.

EDUCATION

Hanoi University of Mining and Technology **2019 – 2024**
Major: Computer Science *Graduation Classification: Engineer - Good*

Hanoi Open University **2025 – Current**
Major: Chinese Language *Status: Currently Studying*

TECHNICAL SKILLS

- **AI/ML:** Expertise in data analysis, data processing, machine learning, deep learning (Neural Networks), advanced RAG, and advanced Prompt Engineering (Step back, Chain-of-Thought, etc).
- **Programming:** Python (main), JavaScript (secondary), Java, C++, C#, etc.
- **Database Management Systems:** MySQL, PostgreSQL, MongoDB, Redis, Cosmos DB, etc.
- **Cloud:** Hands-on experience with Azure (Azure ML, OpenAI, Cosmos DB, etc.) and AWS (SageMaker, Bedrock, S3, etc.).
- **DevOps & Tools:** Docker, Kubernetes, GitLab CI/CD, GitHub Actions, Linux, Bash, Git, ArgoCD, Prometheus, Grafana, etc.
- **Development:** Familiar with Windows, Linux environments.
- **Third-party Payment Services:** Vnpay, Vitapay, etc.
- **Software Design:** Strong grasp of design patterns (Singleton, Factory, Observer, Strategy, etc) and architectural models (MVC, MVT, DDD, Microservices, etc).

WORK EXPERIENCE

TinhVan Software JSC **01/2023 – Current**

Deputy Manager, R&D Department *07/2026 – Current*

- Lead research, analysis, benchmarking, and performance evaluation of emerging Generative AI technologies, including LLM/VLM families such as Qwen and DeepSeek, as well as local model serving and inference frameworks such as Ollama.
- Design and conduct experiments to evaluate AI models across accuracy, reasoning capability, latency, resource utilization, and suitability for real-world enterprise use cases.
- Serve as a member of the **AI Champions** team, researching emerging AI trends and identifying opportunities to apply AI across the company's daily workflows.
- Propose and conduct Proof-of-Concept (PoC) initiatives for AI tools and solutions aimed at improving employee productivity, work quality, and operational efficiency.
- Translate research findings and experimental results into technical recommendations and practical AI adoption strategies for internal teams and business applications.

AI Team Leader *01/2024 – 06/2026*

- Led the development of AI-powered chatbot and document processing solutions, with a focus on RAG pipelines, retrieval quality, and query optimization.
- Designed and optimized end-to-end AI systems integrating LLM/VLM models with backend services and user-facing applications.

- Guided team members in model experimentation, fine-tuning, evaluation, deployment, and cloud-based AI development on Azure and AWS.

AI Engineer *01/2023 – 12/2023*

- Developed AI models and pipelines for chatbot systems and intelligent document processing.
- Implemented RAG techniques, information retrieval, query processing, and LLM-based application workflows.
- Researched, fine-tuned, and deployed LLM/VLM models using Azure and AWS cloud infrastructure.

PROJECT EXPERIENCE (MAIN PROJECTS ONLY)

HR-CV Management System – AI-Powered Recruitment Platform **04/2026 – Current**

- **Project Size:** 02 members
- **Position:** Team Lead
- **Project Description:** Designed and developed an end-to-end, event-driven HR recruitment platform that automates CV/JD data extraction, candidate-job matching, and applicant pipeline tracking. Architected microservices with GitOps best practices, featuring an asynchronous AI agent engine, high-performance REST APIs, and a modern web dashboard.
- **Job Description:** Led system architecture and development for the 2-member team. Architected the event-driven ingestion pipeline connecting MinIO S3 notifications with Apache Kafka to trigger background AI processing. Built the multi-tiered AI Agent engine using LangGraph and LangChain with Pydantic structured outputs and LangSmith tracing. Implemented full GitOps automation using ArgoCD (App-of-Apps) and Helm on Kubernetes (k3s), and mentored the teammate on backend API design and code quality.
- **Core Technologies:** LangGraph, LangChain, OpenAI, FastAPI, Next.js 16, TypeScript, Apache Kafka, MinIO (S3), PostgreSQL, Redis, Kubernetes (k3s/k3d), Helm, ArgoCD, Docker.

DIT AI Research & Integration **05/2026 – Current**

- **Project Size:** 04 members
- **Position:** Team Lead
- **Project Description:** Research and experiment with advanced AI agent technologies for a Japanese company. Focus on integrating computer vision and speech processing for meeting analysis and AI-based automated scoring.
- **Job Description:** Supported the team on technical issues. Pre-designed core components to ensure easy maintenance, and provided technical advice and solutions when necessary.
- **Core Technologies:** Prompt Engineering, RAG, Azure Service (Foundry, Cognitive Service, Cosmos, etc.), fastapi, azure agent framework, langchain, etc.

AI Agents for High-Security Oil & Gas Data **10/2025 – 05/2026**

- **Project Size:** 03 members
- **Position:** Team Lead
- **Project Description:** Developed a highly secure multi-agent AI platform for managing and analyzing sensitive Oil & Gas data for government-related organizations in Vietnam.
- **Job Description:** Served as the primary technical liaison, managing regular client communications to align business needs with technical delivery. Architected the system's core infrastructure, provided solutions for complex scalability issues, and defined long-term technical strategies. Led the engineering team in implementing advanced multi-agent workflows and core Azure-based services.
- **Core Technologies:** Agent and Multi agent, Prompt Engineering, RAG, Azure Service (Foundry, Cognitive Service, Cosmos, etc.), fastapi, azure agent framework, langchain.

Online Education System **01/2025 – 11/2025**

- **Project Size:** 30 members
- **Position:** Developer
- **Project Description:** Enhancing and expanding the platform's features to improve the learning experience and support more subjects.
- **Job Description:** Responsible for developing and implementing features on support services and data management-related services.
- **Core Technologies:** NestJS, React, Flask, Airflow, Minio, Apache Kafka, Kubernetes, Grafana, Prometheus, ArgoCD, etc.

AIRealize **12/2023 – 10/2025**

- **Project Size:** 04 members
- **Position:** AI Engineer
- **Project Description:** Developed by Arise Innovation Inc, this system integrates modern generative AI with traditional AI models. Targets high-security data from banks, enabling secure and intelligent analysis of end-user data.
- **Job Description:** Perform data analysis, processing, and evaluation; assess and select LLM models; enhance NLP by combining ML algorithms with prompt engineering; analyze and apply advanced techniques to improve RAG efficiency, etc.
- **Core Technologies:** LLMs, RAG, PE, DA, NLP, ML Algorithms, Flask, Azure Services, etc.

Vision Language Model **10/2024 – 12/2024**

- **Project Size:** 04 members
- **Position:** AI Engineer
- **Project Description:** A proof-of-concept (POC) project aimed at developing advanced AI Vision models leveraging AWS SageMaker to fine-tune and evaluate VLMs for OCR tasks.
- **Job Description:** Utilize AWS SageMaker to fine-tune renowned VLMs (e.g., QwenVL, Mistral). Apply machine learning algorithms to evaluate the model's experimental results for the target task.
- **Core Technologies:** VLM, AWS Cloud/SDK, Huggingface, NLP, etc.

Budget Management Tool **06/2024 – 09/2024**

- **Project Size:** 15 members
- **Position:** Developer
- **Project Description:** Used to manage departments' and stores' expenditures and revenues across the entire system. Build monthly, quarterly or yearly reports on profit or loss.
- **Job Description:** Participate in server configuration, process financial data (Big Data), and enhance system functionalities.
- **Core Technologies:** ReactJS, NodeJS, Python, Golang, MongoDB, Redis, etc.

Oil Well Prediction Tool **04/2023 – 11/2023**

- **Project Size:** 02 members
- **Position:** Data Science
- **Project Description:** Integration and enhancement of oil well prediction models for the Vietnam Petroleum Institute (VPI). The goal is to analyze and process geophysical data, train ML models, and predict reservoirs based on geophysical properties.
- **Job Description:** Perform data analysis, model training, and reporting on ML models. Develop tools for automated testing to enable flexible data expansion without dependency.
- **Core Technologies:** Pandas, Numpy, ML, DL, Dash, Python, etc.

LANGUAGES

- **English:** Basic proficiency; able to read and understand technical documentation related to software development, AI, and IT.
- **Chinese (Mandarin):** HSK 3 equivalent; able to communicate in basic everyday conversations and understand commonly used Chinese.

PRIZE

- **2nd Place – TinhVan Hackathon**, May 2026.
- **Outstanding Employee of the Year 2025**, TinhVan Software.
- **Outstanding Employee of the Year 2024**, TinhVan Software.
- **Outstanding Employee of the Year 2023**, TinhVan Software.
